By Phillip Campbell

Perhaps no entity has left such an enduring mark on Western civilization as the Roman Empire. Rome's history, language, religion, culture, law, and political institutions have profoundly shaped the development of the western world. Nor is Rome's influence merely historical; women in 2023 were surprised when a popular TikTok trend revealed that, even now, the average man thinks about the Roman Empire at least once per day. Clearly, Rome maintains an impressive hold on the popular imagination.

Indeed, Rome's legacy is so illustrious that many other entities throughout history have claimed to be the successor states to the Roman Empire, asserting political or cultural continuity with Rome in an attempt to harness Rome's illustrious heritage for themselves. The Holy Roman Empire and the Byzantine Empire are the two most notable examples, but Tsarist Russia also claimed to be Rome's successor (the word *Tsar* means Caesar; the imperial name Romanov means "Roman" or "descendant of Roman"). In the Middle Ages, the Seljuks created the Sultanate of Rum (Rome) in eastern Anatolia, from the Parthian word for Rome. The Ottoman Turks, as well, laid claim to Rome's legacy. After the Turks overran Constantinople in 1453, Sultan Mehmet II adopted the titles *kayser-i rûm* ("Caesar of Rome") and *basileus* ("emperor") and argued that the Turkish Sultans were the legitimate successors to the Roman Emperors. The Ottoman writers referred to the Ottoman Empire *diyar-I Rûm* ("lands of Rome"), *memalik-i Rum* ("Roman realms"), and just *Rûm* ("Rome"). And as late as 1912, the Greek-speaking populace of the Aegean island of Lemnos was referring to themselves as "Romans" (Ῥωμαῖοι) rather than Hellenes (Ἕλληνας).

With so many polities claiming to be the successor state of Rome, is there any way of determining who has the strongest claim? Among the various claimants, the Byzantine Empire and the Holy Roman Empire are generally considered the strongest. We shall consider the arguments for each in turn in hopes of determining which of these has the strongest claim to being the successor of the Roman Empire.

### **Byzantium: Rome's Institutional Successor**

The origin of the Byzantine Empire came from the division of Rome into eastern and

western halves during the 3<sup>rd</sup> and 4<sup>th</sup> centuries. This division was first made by Diocletian in AD 286, but proved to be impermanent, as Constantine would reunite the eastern and western halves in 324. Constantine would move Rome's capital east, to the city of Byzantium on the Bosphorus, which he refounded as Constantinople. Constantinople would go on to become the most important city in the east and the center of the Roman world from the 4<sup>th</sup> century on.

By the late 4<sup>th</sup> century, economic and military pressures made it too difficult to keep the empire's sprawling territories together. The Roman Empire was again divided after the death of Theodosius in 395, with the eastern and western halves going to each of his sons. This division proved to be permanent, and the two halves of Rome became increasingly estranged, politically and culturally. The Western Roman Empire would devolve into a heavily Germanized entity whose emperors were dominated by a barbarian military junta, whereas the Eastern Roman Empire became an increasingly bureaucratized and commercialized state coextensive with the Greek-speaking lands of the eastern Mediterranean.

The Western Roman Empire fell to the barbarian hordes of Odoacer in 476 when the last Roman Emperor—Romulus Augustulus—was deposed at Ravenna. Rather than take the imperial title for himself, Odoacer sent the imperial insignia back to Constantinople, informing the Eastern Roman Emperor, Zeno, that Italy no longer needed an emperor. Instead, Odoacer took the title "King of Italy." Thus, Western Europe began its gradual metamorphosis into the various kingdoms of the Middle Ages.

The Eastern Roman Empire, however, continued on. In the absence of its Latin-speaking counterpart, the Eastern Roman Empire became heavily "Greekified" in language and culture. The final emperor with any competency on Latin was Justinian (r. 527-565), after which the government of the Eastern Roman Empire became exclusively Greek speaking. Today, historians tend to refer to this medieval, Greek-speaking entity as the Byzantine Empire, although the distinction between the Eastern Roman Empire and Byzantine Empire is more academic than actual—in reality, there is no hard cut-off point where the Eastern Roman Empire "becomes" Byzantine. The evolution is organic and gradual. This empire continued on until 1453, when, greatly reduced by the Turks, it was finally conquered by Ottoman Sultan Mehmet II. Right up until the very end, Byzantium's emperors regarded themselves as Roman Emperors. The Byzantines called themselves *Romaioi* (Ῥωμαῖοι), that is, "Romans."

Considered structurally, Byzantium has the strongest case to be Rome's successor state simply by virtue of the continuity of its institutions. The Byzantine army developed out of the Roman army. The Byzantine bureaucracy at Constantinople emerged out of the court

established by Constantine at the time of the city's foundation. Byzantium's territories were defined by the boundaries delineated in Roman times. The relationship between the Byzantine monarchs and the Patriarchs of Constantinople followed a trajectory determined during the late Empire. Perhaps the most direct continuity was in the office of the *basileus*, the Byzantine emperors themselves, who stood in a direct line of nearly unbroken succession back to Augustus.

In an institutional sense, Byzantium is the Eastern Roman Empire, and hence the case for Byzantium is fairly cut and dry. But what if institutional continuity is not the only consideration?

15th Century Illustration of Constantinople

### **The Holy Roman Empire: Rome's Ideological Successor**

In the assessment above, you may have noticed a reference to Byzantium's "direct line of *nearly* unbroken succession back to Augustus." That "nearly" refers to a five year lacuna in the otherwise unbroken Byzantine succession, from 797 to 802, a period of immense importance in Christian history.

The late 8<sup>th</sup> century had been a tumultuous time in Byzantium. The century began with a Muslim assault on Constantinople and ended with the chaos of the Iconoclast heresy. The premature death of Emperor Leo IV in 780 brought the nine-year-old Constantine VI to the throne under the regency of his mother, Irene of Athens. Irene would end up seizing power from her son, however, having him blinded and deposed in 797 and ruling as an empress for the next five years, until her own deposition in 802.

Meanwhile, events in the west were unfolding that would change the destiny of Christendom. At this time the most powerful ruler in Europe was the Frankish monarch, Charles, son of Pepin, better known to history as Charlemagne, of the Carolingian dynasty. From the Pyrenees to the North Sea to the banks of the Danube, Charlemagne's might went unchallenged. It was thus in 799, when Pope Leo III was driven from Rome by a coup, that he fled to Charlemagne's court at Paderborn to ask the king's assistance in reclaiming Rome. Charlemagne restored Leo to power the following year and spent Christmas with the pope in Rome. It was after Mass on Christmas Day of the year 800 that Pope Leo placed an imperial crown on Charlemagne's head and proclaimed him Emperor of the Romans.

The coronation was of pivotal importance in the history of Christendom and Europe—probably the most monumental event to happen on Christmas since the birth of Christ. But what of Empress Irene? How could Pope Leo proclaim Charlemagne Roman emperor when there was already a Roman empress ruling from Constantinople?

This is the beginning of the medieval notion of the *translatio imperii*, the idea that the imperial authority (*imperium*), the highest secular power in Christendom, had been “transferred” from the Byzantines to Charlemagne by the Pope. This concept of *translatio imperii* is of supreme importance, as the validity of the imperial title in the west depended upon it. Pope Leo's action was based on the premise that the Byzantine Empress Irene was a usurper. There had never been a custom in the Roman Empire—legal or otherwise—of a woman wielding imperial authority. Irene had succeeded her son Constantine VI to the Byzantine throne as empress, a succession neither the pope nor the Franks regarded as valid, since no woman could hold imperial authority. Leo III thus regarded the Byzantine throne as *sede vacante* and liable to be bestowed upon whomever he wished, by virtue of the pope's *plenitudo potestatis* (fullness of power). We see here an emergent theory of papal power whereby the pope has the right to designate imperial succession in cases when the throne has fallen vacant—essentially, that the imperial office “reverts” to the papacy when the imperial line has faltered.

It is often assumed that the bestowal of the imperial title on Charlemagne was an attempt to resurrect the Western Roman Empire. This is false. You will notice that the coronation of Charlemagne is called the *translatio* (transfer) *imperii*, nor a *resurrectio imperii*. In

crowning Charlemagne, the pope was not resurrecting the Western Roman Empire that had fallen in 476 but transferring the imperial title from Byzantium to Charlemagne. In other words, Charlemagne was the successor not of Romulus Augustulus, but of Constantine VI. The imperial authority, though divided in the latter Roman Empire, was ultimately one. There could only be one *imperium* recognized by Christians. This was an assumption inherited from late Roman times that was still held in Carolingian times. The Christian empire was a kind of holy reflection of the kingdom of heaven. An elaboration of this ideology can be found in the writings of the Irish monk Hibernicus, who was a scholar of Charlemagne's retinue. Hibernicus wrote, "There is only one who is enthroned in the realm of the air [i.e., God]. It is proper that under Him, one only be the ruler on earth, in merit an example to all men."<sup>[1]</sup> Just as oneness was a property of God, so must it be a property of His *imperium*.

Charlemagne crowned Holy Roman Emperor

The pope, as Vicar of Christ, claimed the authority to be able to "translate" this one authority back to the west when the line of succession died in the east. Charlemagne thus became the imperial authority in Christendom. The papacy would exercise this prerogative again when the Carolingian line faltered and the imperial crown was bestowed upon Otto the Saxon in 962 by Pope John XII, reestablishing the *imperium* in the hands of the Germans and constituting what would become known as the Holy Roman Empire.

The legitimacy of the Holy Roman Empire as a true successor state to ancient Rome depends upon one's acceptance of the theory of *translatio imperii*, which holds the pope as

the custodian of the imperial title. The concept of *translatio imperii* was widely assumed throughout the high Middle Ages and was explicitly taught by Pope Innocent III. In the context of the 13<sup>th</sup> century papal conflict with the Hohenstaufen emperors, Innocent argued that the pope is superior to the Holy Roman Emperor. Innocent went back to the occasion of Charlemagne's coronation by Pope Leo III, pointing out that, though the Holy Roman Emperors are elected by a body of German princes, the fact that the emperor is a German at all and not a Greek is because the papacy transferred the *imperium* from the Greeks to the Germans at the time of Charlemagne. Thus, all German emperors owe homage to the papacy, from whom not only their regal authority but all powers and dignities of the *imperium* were derived. In his famous decretal *Venerabilem* of 1202, Innocent stated:

[T]he right and authority to elect a king (later to be elevated to the Imperial throne) belongs to those princes to whom it is known to belong by right and ancient custom; especially as this right and authority came to them from the Apostolic See, which transferred the Empire from the Greeks to the Germans in the person of Charles the Great.[\[ii\]](#)

This notion of the papal transfer of the empire (*translatio imperii*) became a stock argument of the papal loyalists for the duration of the Middle Ages and was repeatedly invoked until the Reformation. Of course, the *translatio imperii* is not exactly a religious dogma, and we should not attribute any note of infallibility to Innocent's teaching. Rather, *translatio imperii* was an attempt to create conceptual schema for understanding the western imperial title within the ideological framework of papal power accepted at the time.

One will notice that the arguments for the Holy Roman Empire are incredibly abstract. They center on a theoretical notion of a singular Christian *imperium*, which, as we have said, could be wielded by one claimant and no other. Furthermore, they require us to accept that the pope is the steward of this *imperium*, who, by virtue of his *plenitudo potestatis*, could bequeath it to whomever he chose. If Byzantium's claim was based on institutional continuity, we may consider the Holy Roman Empire's claim to rest on an ideological basis. Whereas the Byzantines considered the *imperium* as inalienably vested in the Byzantine emperor and the concrete structures of the imperial court at Constantinople, the popes viewed the *imperium* as an alienable quality that could be transferred. It could be said that, for the Latin west, the idea of empire was far more important than whether the ideal could be satisfactorily realized.

*"But put ye on the Lord Jesus Christ" (Romans 13:14)*

## Traditionis Custodes Revelations

### Expose the Folly of a 'Democratized Church'

By Murray Rundus

It is common among both traditionalists and defenders of the post-Conciliar changes to speak of the Second Vatican Council and the subsequent Novus Ordo liturgical reforms as being the "democratization of the Church." To the traditionalist, this is a statement that shows that the post-Conciliar hierarchy has fundamentally acquiesced to Liberal principles, while the Vatican II enthusiasts see this slogan as an emblem of the Church growing closer to the people, the embodiment of the so-called "listening Church." These two things are not actually opposed to one another, but rather the latter is informed by the former and not in the way that many might expect.

While most of us grew up with simplistic notions of the modern Liberal Order being run like a well-oiled machine, with Schoolhouse Rock teaching us "how a bill becomes a law", the actual practice of Liberalism is one predicated on force, lies, and power. This is the eternal problem of Liberalism, as all of the revolutions were themselves based on a violent overturning of a previous regime; the new Liberal regimes have had to justify why their order is somehow better than the one that came before it. The way that this has been achieved is by peddling the myth of "democracy." The reason why this order is better than the last is that the people have the power to choose their leaders and have a say! But, of course, this is nothing more than an illusion of choice as will be

Pope Francis' Traditionis Custodes was fabricated on false pretenses

demonstrated throughout this month's paper in speaking about the current administration and its

advent of disappointments. Our so-called "say" in the affairs of the State is often limited in gerrymandered

territory, decided between two parties, with a small selection of family names.

## The Epstein Files, Israel, and the MAGA movement

By Stephen Kokx

"I would," then-candidate Donald Trump said during an interview with Fox News in June of last year when asked if he would declassify the Epstein files.

"You don't want to affect people's lives if it's phony stuff in there," he added, "but I think I would."

Trump's comments inspired millions of Americans to vote for him. They - including yours

truly - were expecting transparency on the matter.

But President Trump has proven himself to be somewhat different than candidate Trump.

While speaking to the media in the Cabinet Room last month, Trump complained: "Are you still talking about Jeffrey Epstein? This guy's been talked about for years."<sup>2</sup>

Never mind Trump's campaign promise. Never mind his pledge to "drain

the swamp." This was a mask-off moment for the 45th (and 47th) president, and it has rightly caused America First loyalists to declare that the MAGA movement - and Trump's legacy - has gone down the tubes.

Many are now questioning whether Trump is implicated in the files. He probably is. The likelihood is made all the more apparent in light of the drama that played out between his Zionist FBI Director Kash Patel, Deputy FBI Director Dan Bongino, and Attorney General Pam Bondi.

More fuel has been added to the fire thanks to Epstein's accomplice, Ghislaine Maxwell, stating that she would testify to Congress about what she knows. That won't happen, of course, especially in

President Donald Trump is facing trouble in the first year of his new administration.

light of House Republicans blocking a measure that would have forced the files to be released.

If nothing else, Democrats have been gifted a massive

campaign issue they can run on in the mid-terms. They should consider themselves fortunate, as up until now they were in
